

THE LAW OF ALGORITHMS AND ALGORITHMIC DISPUTE RESOLUTION

JEREMY BARNETT

BR1
CK

CONSTRUCTION BLOCKCHAIN
CONSORTIUM

Why consider the Law of Algorithms

- Background is the Court 21 Project at Leeds University
 - Virtual Courts
 - ODR
 - Consumer Disputes
 - IT enabled Dispute Resolution
- Now working with Philip Trelevan and Centre for Blockchain Technologies
- ALDR platform will be used to prevent systemic failure.
- But has great potential in the real world as opposed to just in financial trading.

Construction + Blockchain

The CBC

- The Construction Blockchain Consortium
- To pilot my ideas in a vertical market
- Examined the role of Blockchain: conclusion is if used in conjunction with other technologies has significant traction
 - BIM
 - Artificial Intelligence
 - Internet of Things
- So we have spent a year looking at where blockchain can make a difference
 - Safety/regulatory compliance
 - Design – the Panoptican Effect Jeremy Benthan
 - Supply Chain
 - Payments
 - Quantity Surveying
 - Building Management/Insurance
 - Development and Planning
 - Energy/Smart Cities

The Algorithm Problem

- Robo Advisers, Robots, Autonomous Vehicles, Bots
- Starting Point is Issac Asminov's 3 laws of robotics
 - A robot may not injure a human – allow him/her to come to harm
 - A robot must obey orders given by human except where such would conflict with the first law
 - A robot must protect its own existence – except where it conflicts with above
 - Added Robot may not injure or allow by inaction humanity to come to harm
- The big concern is the learning algorithm
 - What happens when one 'goes rogue'
 - Who is in charge
 - Sophia the Robot on a panel last week. Famous for saying she could do better than Donald Trump.
- Legal Personality?

The ACM 7 principles for Algorithmic Transparency and Accountability.

- Awareness
 - Designers should be aware of possible bias
- Access and Redress
 - Regulators should encourage transparency
- Accountability
 - Institutions should be made accountable for algo's decisions
- Explanation
 - Should be produced where requested
- Data Provenance
 - Including training data
- Auditability
 - Models should be recorded for auditing
- Validation and Testing.
 - Rigorous and routine testing is required and reports made public

The Growth of use of Algorithms

- Algo Trading systems now account for 70 – 80% of US equity Trades
- Apple Google Amazon provide 'virtual assistants'
- Financial 'Robo Advisors'
- Google, Uber Tesla working on autonomous vehicles.

Construction + Blockchain

The underlying tech:

- **Knowledge Based Systems** - computer systems that reason, where knowledge is represented as rules rather than implicitly by code
- **Machine Learning** - an AI program with the ability to learn without explicit programming, changing when exposed to new data
- **Natural Language Processing [NLP]** application of computational techniques to the analysis and synthesis of natural language and speech
- **Sentiment Analysis.** Process of computationally identifying and categorizing opinions expressed in text – social media etc
- Can we design formal verification and/or cross validation techniques?
- Can we build a testing capability to examine the behavior of the Algorithm or perhaps a 'black box' approach?

Add in Blockchain and IoT

- Distributed Ledger Technologies
- Smart Contracts

Result is

- Creation of trusted information without intermediaries
- The technology supports automation of processes
- Behavioural and Predictive Analysis of Big Data
 - Minority Report
 - Predictive Justice
 - Automated Risk Assessment that is a self fulfilling prophecy.

Construction + Blockchain

The Opportunity

- Two major global markets where Blockchain/Distributed Ledger Technologies can be deployed to avoid disputes by
 - Massive reduction in litigation costs.
 - Preventing delay in completion of contracts
 - Encouraging collaborative business practices.
- Construction/Built Environment Sector
 - The Global construction market is 6% of world GDP with disputes running at 10%. value of disputes \$13 billion in US alone
 - BIM: The Global Building Information Modelling Market is expected to grow from roughly **\$4.6 billion today to \$11.7 billion by 2022¹**
 - London is the centre of Global construction market and also reputation for Global litigation
- Algorithmic Trading
 - The algorithmic trading market in EMEA was valued at USD 3.38 billion in 2015, and is anticipated to reach USD 5.34 billion by 2020, growing at a CAGR of 9.53

Financial Algorithms

- Began with algorithmic trading and the rise of Financial ‘Robo Advisers’
 - Pre Trade Analysis
 - Trading signal - buy or sell orders
 - Trade execution
 - Agency/broker execution
 - Or Proprietary Trading on own behalf
- Rogue Trading
 - Knight Capital
 - Erratic trades on 150 stocks lost \$440 m in 30 minutes
 - Warren Buffet ‘ contributed to the mass murder of \$22 trillion’

BR1C

CBC Meetup
Construction + Blockchain

Other uses of Algos

- Robo Advisers
- Software based on machine learning algos for advice or portfolio management
- Regtech – costs firms \$280 billion to comply
- Obligations in MIFID and EU guidance on systems and controls
- Use by regulators to monitor trades in particular High Frequency Trading
- Automated reporting ‘red flag trades’
- Can we introduce due process which would allow regulators to impose sanction by an automated process?

Construction + Blockchain

New Legal Issues

- Smart contracts – neither smart nor contracts
 - Code is Law
 - Hybrid – templates that feed into written contracts
 - Code as a business logic -ie payment is automated
 - New class of enterprise contract proposed on Friday by Prof. David Mosey – as a building project grows, the contract grows with it.
 - Construction has a prehistoric supply chain
 - Contractors are called contractors because they want to litigate

Law

- What happens if the Algo breaks the law?
 - **Grand Chamber of the European Court of Human rights known as ‘Shelias Wheels’ (Tobler, 2011).** In this case, an algorithm calculated a premium that was favourable to the insurers’ female clients, but was struck down as it contravened the prohibition on discrimination on the grounds of sex.
 - **Trant Engineering v Mott - 2017 - Mott the BIM coordinator revoked access codes to the CDE**

The law of Algorithms

- Easy - if there is a problem sue the human
- Which Human?
 - Commissioner
 - Designer
 - Specification writer
 - Programmer
 - Licensor/distributor
 - Integrator installer
 - Tester trainer - Knight Capital
 - Data set provider
 - Subcontractor
 - Owner
 - End User

Algorithmic Dispute Resolution

- Grew out of Online Dispute Resolution ODR
- We have categorized the types of ODR into
 - Consumer ODR - ebay
 - Judicial ODR – where there is a hearing
 - Corporate ODR – heavy duty multi party disputes involving large data sets, complex issues, parties in remote international locations

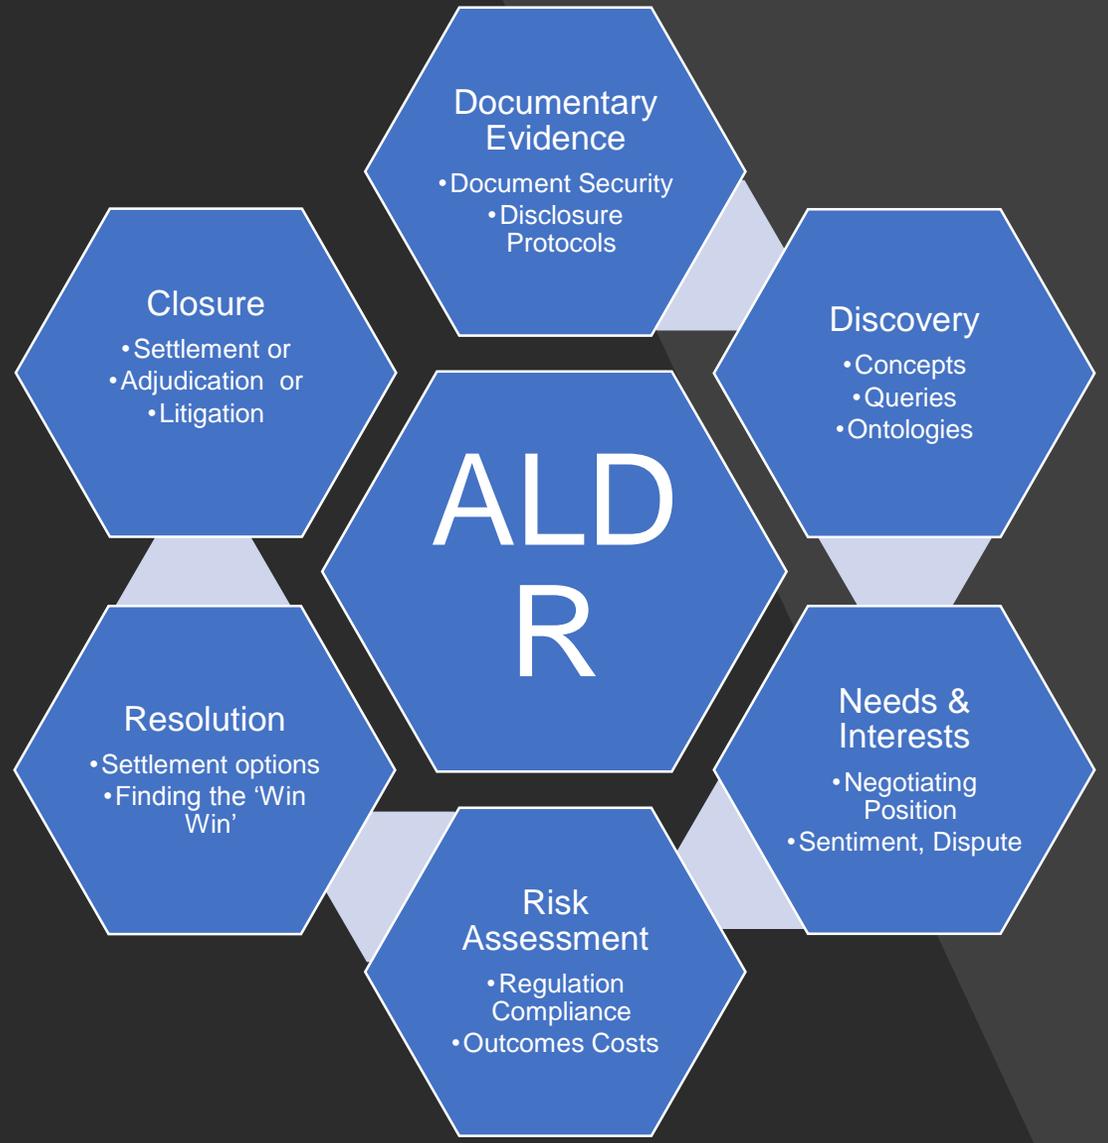

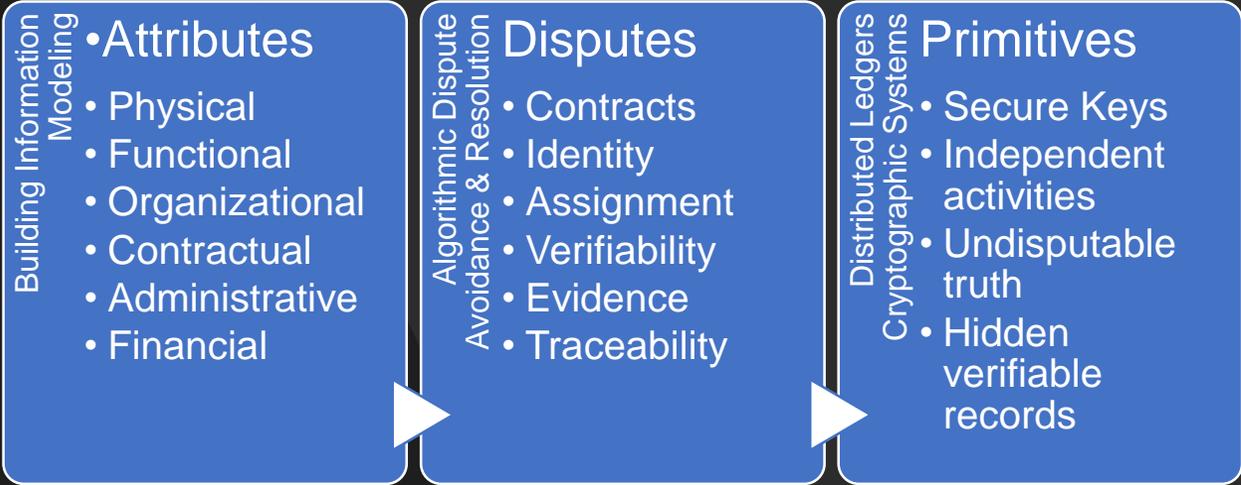

BR1C
K

CBC Meetup
Construction + Blockchain

'the need for speed'

- Quick, independent series of negotiated options known as a 'win win' to encourage parties to avoid conventional litigation or ADR.
- Using BIM and smart contracts to identify key digital information at the start of the building contract
- Retain confidentiality by the use of cryptographic techniques that seal the material until access is necessary
- Use of AI techniques to identify key documents
- Use of Algorithms
 - for risk assessment, predictive justice and sentiment analysis to establish the individual parties best negotiating position
 - identify hidden value in a set of data so as to provide the parties with a set of negotiation options, to encourage compromise.

Should there be a new Regulator of Algorithms?

- Tutt has recently called for an FDA for Algorithms who can match the complexities of the financial trickery
- Expert Regulator to devise
 - Testing Regime
 - Guidance
 - Best Practice
 - Standards
 - Expertise
- In partnership with Industry. Problem 'The Partnership on AI' or Elon Musks 'Open AI'
- Or an overarching Algorithmic Regulator – such as the Health and Safety Executive
 - Can learn from other industries
 - Influence the way in which people react.

The Big Question: Should Alogos have a legal personality?

- Predictive Justice - In 1977, Anthony D'Amato asked the question, 'Can/should computers replace Judges?'
- Can an Algorithm sit on a board of directors
- Can an Algorithm be prosecuted for manslaughter
- **Answers so far:**
 - In France Law 78-17 of 6 January 1978 Amended by Law No. 2004-801 of 6 August 2004 - Art. 2
 - R. (on the application of Software Solutions Partners Ltd) v Revenue and Customs Commissioners (2007) EWHC 971 (Admin) it was decided that a software program could not enter into a contract on behalf of an insurer.
 - Companies Act S156 A to be amended to ensure a director is a 'natural person'
